

Pub Restaurant with Four Zones

In this scenario we have a pub restaurant with a beer garden. By using a 4 zone mixer amp, each main area of the pub can be controlled separately in order to set an appropriate volume level. Cabinet speakers are used in the main pub / restaurant area with weather resistant cabinets being used in the beer garden. Ceiling speakers are located in the toilets. A simple paging microphone can be used to make customer announcements. A media player enables long playlists to be played back via SD / USB or connect to a Bluetooth enabled device.
